New canine heavy and light chain variable domain polypeptides, useful for treating canine allergy.

Disclosure; Page 24; 130pp; English.

The invention relates to a novel canine heavy or light chain variable domain polypeptide. The protein of the invention demonstrates antiallergic activity and may be useful for treating canine allergy, possibly via externer. The current sequence is that of a canine immunoglobulin light chain variable domain complementarity determining region (CDR) peptide of the invention.

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176 and the encoded proteins (ABB7737-ABB772). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

heavy chain. The antibody binds to a target structure displayed in and on the cell surface of human gastrointestinal epithelial tumour cells and in a subpopulation of normal human gastrointestinal epithelial cells. The target structure especially comprises alpha6beta4 integrin. This is a tumour-associated antigen. The antibody, and its fragments, are useful for treating conditions based on anti-anglogenic mechanism in humans.

The present sequence represents a Monkey antibody light chain linked to a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and encoded proteins thereof. Specifically, it refers to the isolated proteins thereof. Specifically, it refers to the isolated brosophila odourant receptor genes, and compounds that bind to and modulate these receptors cause various behavioural responses such as mating, repulsion or flight. Accordingly, the present invention describes such compounds (both natural and synthetic) that are useful for attracting insects to traps or to localised toxins, for repelling insects from individuals or populated residential areas, or for interfering with the function of olfactory system such that insects are unable to locate food and hosts. As such, these compounds can be used to control insect damage and the spread of disease, and will significantly reduce dependence on toxic pesticides having a direct and immediate impact on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel Anopheles gambiae odorant receptor polypeptides and nucleic acid encoding the polypeptides, useful as targets for identifying pest control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    coordinated insect management programs. This polypeptide sequence is a
Drosophila melanogaster odourant receptor protein, which is homologous to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to novel Anopheles gambiae odourant receptor genes
                                                                                                                                                                                                                                                                                                                        odourant receptor; fruitfly; mating; repulsion; flight; insect damage; disease spread; pesticide; insect management program.

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human nucleic acid management-associated DKFZphtes3_2m18 homologue.
                                                  Drosophila, developmental biology, cell signalling, insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; SEQ ID NO 18177; 21pp + Sequence Listing; English

This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, neutralising antibody, interleukin-12; IL-12; antiinflammatory, complementarity determining region, CDR; antirheumatic; antiarthritic; antisolarotic; neuroprotective; antigoriatic; antiasthmatic; cardiant, antiparastic; antibacterial; immunosuppressive; Crohn's disease; multiple sclerosis; rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Duncan AR;
                                                                                                                                               Nucleic acids having the sequences of clones isolated from libraries different human tissues, useful in recombinant DNA methodologies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Anti-hIL12 antibody light chain CDR2 amino acid sequence SEQ ID 527.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Myles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

New human antibody specific for human interleukin-12 (IL-12) used

ö

Gaps

```
This invention relates to a new human antibody specific for human conterleukin-12 (IL-12). The invention also includes antigen binding contents that bind to IL-12. Sequences ABB39485-B39516 represent human anti-IL-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences. And also includes variable region antio acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39517-B39570 represent anti-IL-12 CDR3 related amino acid sequences AAB39517-B39771 represent other CDR sequences. Light chain CDR3 consensus sequences are given in AAB40064-B40067. Primers used in the identification and construction of the antibodies of the invention are given in AAC61062-CC G1071. The antibody of the invention is a neutralising antibody and has antibacterial and immunosuppressive activity. The antibodies or antigence antibacterial and immunosuppressive activity. The antibodies or antigence in the detrimental releases of human IL-12, especially Crohn's disease, multiple sclerosis and rheumacoid arthrities. They can also be used in the antibodies construction of a pharmacoutical composition to treat human IL-12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antibacterial; virucide; fungicide; opthalmalogical; vulnerary; secreted protein; rheumatoid arthritis; hyperproliferative disorder; cardiovascular disorder; cardiac arrest; carebrovascular disorder; cerebral ischaemia; angiogenesis; nervous system disorder; cerebral ischaemia; infection; ocular disorder; corneal infection; wound healing; epithelial cell proliferation; skin ageing; food additive; preservative; antiproliferative; optiferation; skin ageing; food additive;
treat disorders characterized by aberrant IL-12 expression e.g. Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

and New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives.

Claim 11; SEQ ID NO 1561; 980pp; English

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used

2000US-0229344P. 2000US-0229345P. 2000US-0229509P. 2000US-0229513P.

The invention relates to human novel polypeptides and their associated polymucleotides. The polypeptides and polymucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemic lugus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders, gastrointestinal disorders, pulmonary disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left reart syndrome), renal disorders (e.g. acute kidney failure and end-stage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and appendicitis), allergic reactions and conditions (e.g. acthma), blood inflammatory diseases. Sequences Abusatalal inflamction) and cancerous diseases. Sequences Abusatalal inflamction and cancerous diseases. Sequences Abusatalal inflamction novel polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptides and nucleic acids, useful in gene therapy for treating, inhibiting or preventing e.g. neural, immune system, muscular, respiratory, reproductive, gastrointestinal, pulmonary, cardiovascular or renal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

```

This invention describes a novel single-chain fragment of human antibody

```
that inhibits replication of hepatitis C virus (HCV) and comprises the variable regions (VL and VH) of the light and heavy chains of an antibody directed against at least one essential viral protein. The invention also describes a method of identifying antibody fragments that inhibit replication of HCV. The protein is an envelope, core or non-structural protein, especially B1, B2, core, NS3-protease or -helicase, NS4A coffector or NS5B RNA polymerase (especially a NS3 helicase). The VL and VH regions may be linked covalently or through a linker, particularly a hydrophilic and/or flexible peptide. The single chain fragment may also be linked to a non-protein polymer and where intended for diagnosis, it may include disulfide bridges. The method of the invention involves identifying a DNA library of antibody fragments against one or more essential HCV proteins prepared from bone marrow of patients with chronic HCV infection. The library is cloned and expressed on the surface of phages. Phages that express fragments with high affinity for essential proteins are selected by many cycles of selection and reamplification (panning). Sequences that encode the selected fragments are then copic as soluble proteins, in bacteria (particularly Escherichia coli) and recovered from the periplasmic space. The products of the invention or for gene. The invention have virucide, hepatotropic and antiinflammatory activity. The covers single chain fragments are used to prepare vaccines, especially for passive immunisation and for diagnosis of HCV infection or for gene therapy of HCV. The sequence and structure of single chain fragment can be used for design of HCV protein inhibitors. This sequence represents a human continuely fragment described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynuclectide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, chromosome mapping, gene mapping, gene therapy, forensic, food supplement, medical imaging, diagnostic, genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          87.8%; Score 36; DB 7; Length 249;

in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic maino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in the printed specification.
                                                                                                      The invention relates to isolated polynucleotide (I) and polypeptide (II)
                                                                                                                                         sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents MOP9, a novel member of the PAS superfamily, where PAS stands for PER/ARNT/SIM domains. MOP9 cDNA (see AAXS8988) was cloned from human brain mRNA. MOP9 displays extended
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 36; DB 4; Length 438; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Clock gene Baml2 and expressed clock protein BWAL2 important in clock oscillation mechanism and relating to circadian rhythm, used in diagnosis of and developing drugs for insomnia and other sleeping disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a DNA sequence encoding clock protein BMAL2 (brain-muscle-Arnt-like protein 2). The gene and protein are applicable in diagnosis of and development of drugs for insomnia and other sleeping disorders e.g. non-24-hour sleep, aleep-phase forward or retreat syndrome and time-zone variation syndrome. ABG92865-ABG92879 represent BMAL2 amino acid sequences of the invention. (Updated on 29-AUG-2003 to standardise
homology to MOP3 (see AAY06291). It pairs with CLOCK and MOP4 (see AAY06292) and binds an B-box element with flanking region specificity. The invention provides novel MOP 2-9 nucleic acids (see AAX06289-97). These we useful in a variety of research, diagnostic and therapeutic applications. Several of the MOP8 are alphaclass, hypoxia-inducible factors. Others are involved in circadian signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, clock protein BMAL2; brain-muscle-Arnt-like protein 2; insomnia; sleeping disorder; non-24-hour sleep; sleep-phase forward; retreat syndrome; time-zone variation syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Homo sapiens.

```
The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. raddioimmunoassays or erzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune coplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, transplantation, for supporting cell culture of primary tissues, to respend the content of the perverse storage and in chemotrais. The polypeptides can also be used to as a content of primary tissues, to respond the content of the perverse storage and in chemotrais. The polypeptides can also be used to as a content of primary tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a novel secreted protein of the invention. Note: The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       87.8%; Score 36; DB 4; Length 591;

New polypeptides and nucleic acids, useful in gene therapy for treating, inhibiting or preventing e.g. neural, immune system, muscular, respiratory, reproductive, gastrointestinal, pulmonary, cardiovascular or renal disorders.

Claim 11; SEQ ID NO 1139; 402pp; English

The invention relates to human novel polypeptides and their associated polymucleotides. The polypeptides and polymucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. can mustiple sclerosis), pulmonary disorders, reproductive disorders, can quality and ployps and sinusitis), reproductive disorders, congenital heart defects, Ebstein's anomaly and hypoplastic left cheart syndrome), renal disorders (e.g. acute kidney failure and end-stage congenital), inflammatory diseases (e.g. septic shock, bursitis and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and appendicitis), allergic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atherosclerosis and myocardial merrals and candersous diseases. Sequences ABUSSA914-ABUSSS99 and ABU55748 represent human novel polypeptides of the invention

Patent No. 6610836
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: PNEUDORICE ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILLE REFERENCE: 2709.200401
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR APPLICATION NUMBER: US 60/117,747
SEQUENCE FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 11252, Application US/09489039A
